Santa Ynez, CA 93460, USA.

Dear **Mr. Craig Shields,**

YOUR FREE OFFER IN: WRITING UP BUSINESS PLANS.

On behalf of our people, I would like to thank you for your free offer and consideration in writing up our Business Projects, Executive Summary and the possibility of securing Seed Capital and Funding.

Introduction.

We have strong passion and conviction for the use of Clean Green Technology in all sectors in our villages, community and in our developing country Papua New Guinea.

Some profits from our proposed mineral mines will be invested in further developing our proposed chain of Tourist Holiday Getaway Eco Resorts to world class standards. And to promote our unique and great diversity of over 800 languages, cultures and our beautiful contrasting scenes from white sandy beaches to lush tropical rain forests throughout the country.

We would like to downstream our coconuts, cocoa and other natural resources. We would like to resell or assemble all electric cars and would like to run electric trucking, electric taxis and electric bus and electric marine transportation and logistics services Papua New Guinea.

There are four (4) mines in our area to be developed. I hold "Power of Attorney" over two in our area. In a neighbouring area a different landowner group in Frieda River were subject to a new partnership and an Australian company will be developing this biggest Copper/Gold mine in the Southern Hemisphere. There is opportunity for our Group to buy shares into this enormous mine.

NUBIA & POTSDAMHAFEN PLANTATIONS.

We have bought back our 520 Ha Plantations from the Catholic Mission and the Plantations are in a semi run down state. We need financial injection to revitalize and re-develop the Plantations.

We would like to build a soap factory, coconut cosmetic products, coconut milk products and other by-products i.e. coconut husk fibres to make floor door mats etc. The plantations needs: basic infrastructure, new tractors, backhoes and Solar Hybrid Power Systems.

As part of our Community Obligations and Vision, we intend to setup and assist: schools, technical schools, water systems, village lighting, hospital, solar vaccine fridge systems, children and women

health clinics are some of our goals. Many Jobs will be created in our struggling rural communities. We would require Ten Million American dollars for this Project.

BIO-FUEL PLANT.

We will make land available just out of Madang and out of Port Moresby to set up two Bio-Fuel Plants to harness genetic living organisms that convert direct solar sunlight and CO2 to produce gasoline, diesel and jet fuel. We anticipate to supplying Bio-fuel to Mining and Aviation industries in Papua New Guinea, Australia and New Zealand. This is disruptive technology and the fossil fuel companies are getting uneasy and are not too keen that our project gets off the ground! We would require Four Hundred Million American dollars for these two Bio-Fuel Plants to be installed.

MINING.

We have gold, silver and other minerals in various locations and samples are rated at 92 %. We prefer using a new German Green Technology of applying high voltage (similar to lightning) to separate the minerals from the rocks rather than using traditional heavy metals for separation. We would require Twenty Million American dollars for this Project.

OIL & GAS.

We have some oil and gas in the area as discovered by Anderson Smith of USA in the late 1980's. I understand it was not economically feasible to develop. I would like to have other experts to independently verify this. We would require Five Million American Dollars for this Project.

TOURIST HOLIDAY GETAWAY ECO RESORT.

One part of one of the Plantations will be converted into a Tourist Holiday Getaway Eco Resort with a golf course, tennis courts, recreation fishing, conference facilities and amenities, utilizing Clean Green Technology. The beautiful Potsdamhafen cove with its white sandy beach and pristine clean clear waters is most ideal to set up a world class Holiday Getaway Eco Resort. A travel connection to the famous Sepik River is just an hour away. We would require Fifteen Million American dollars for this Project.

ELECTRIC BUS & MARINE PROPULSION TRANSPORTATION SERVICE.

We would like to run a fully electric bus service in major cities and towns of Papua New Guinea. We have three (3) cities and five (5) towns in rural areas that we would like to start off with. Over 87% of the 8 million populations of our people live in rural areas. This will be first of its kind if the Project goes ahead. We would require Ten Million American dollars for this Project.

There are minimum Risks in the Projects.

Mr. Craig Shields, thank you for your consideration in writing up our Business Plan, Executive Summary and the possibility of securing Seed Capital and funding. The kick start of one or two of these Projects will have a positive domino cascade effect on the development of other Projects.

Thank you again for your kind consideration.

Yours faithfully

Luimack Johnson

Chairman/ Director & Landowner holding "Power of Attorney".

Hanza Bay Plantations Limited.

Director, Kakamali Enterprises Limited & KEL GO Energy.
